

JAX-RS demo with STS

Java setup

- a). Open a command prompt and type the below instructions:
setx JAVA_HOME "C:\RestBasic\software\jdk1.8.0_231"
setx PATH "%PATH%;%JAVA_HOME%\bin"
- b). check java version from the command prompt

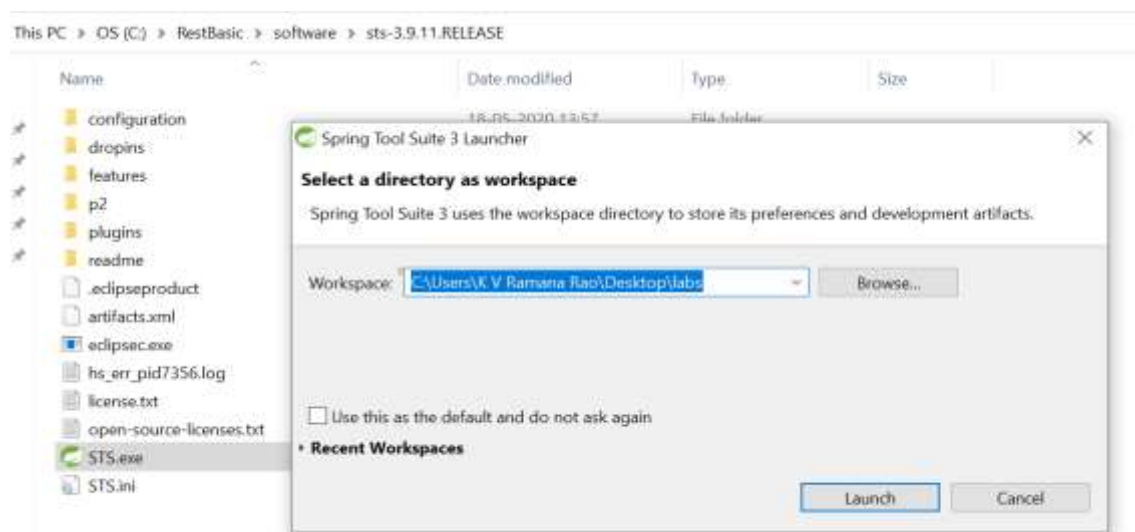

```
C:\Users\K V Ramana Rao>java -version
java version "1.8.0_231"
Java(TM) SE Runtime Environment (build 1.8.0_231-b11)
Java HotSpot(TM) 64-Bit Server VM (build 25.231-b11, mixed mode)
```

Maven setup

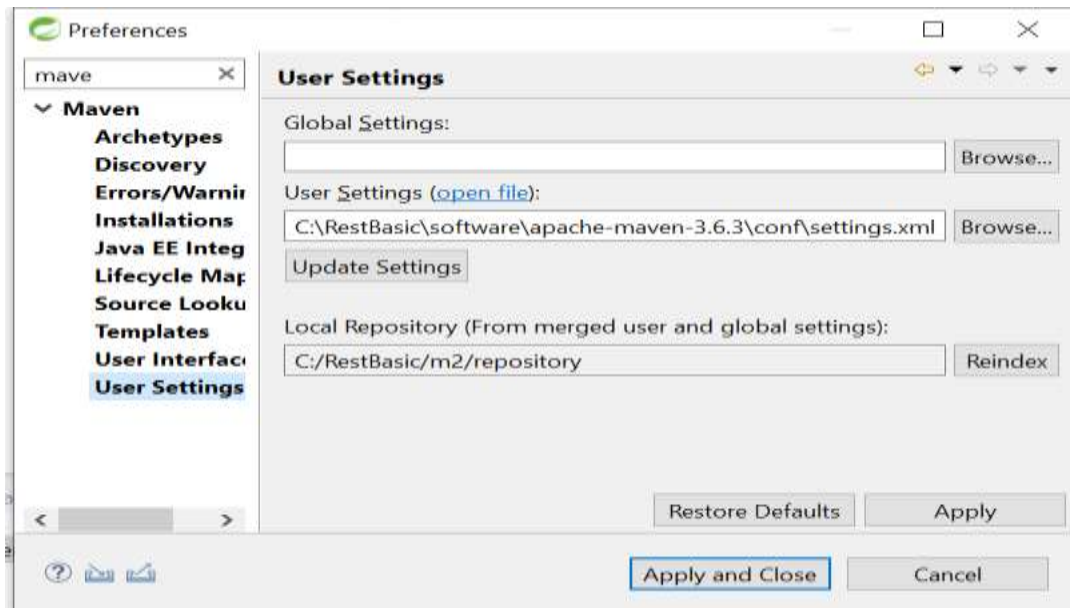

- 1). Open c:/RestBasic/software/apache-maven-3.6.3/conf/settings.xml and update the below entry at line number 54

```
49 <!-- localRepository
50 | The path to the local repository maven will use to store artifacts.
51 |
52 | Default: ${user.home}/.m2/repository
53 -->
54 <localRepository>C:/RestBasic/m2/repository</localRepository>
```

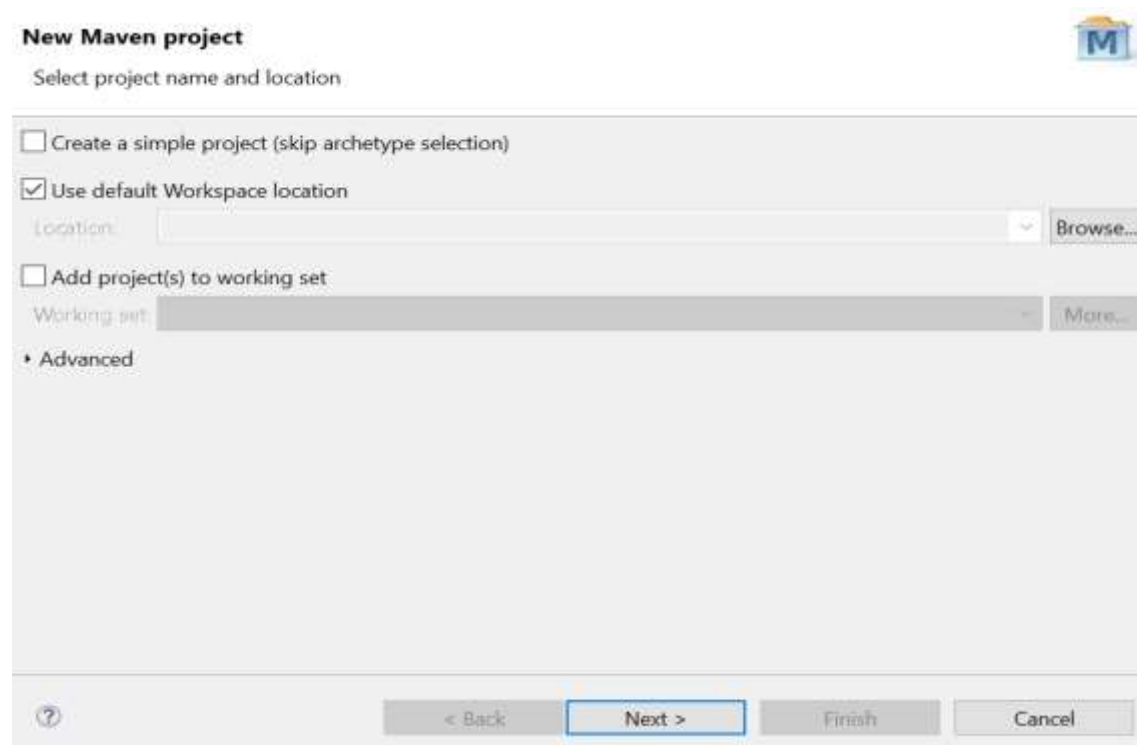

1. On Desktop create a new folder "labs"
2. Open STS -> c:/RestBasic/software/ sts-3.9.11.RELEASE/STS.exe

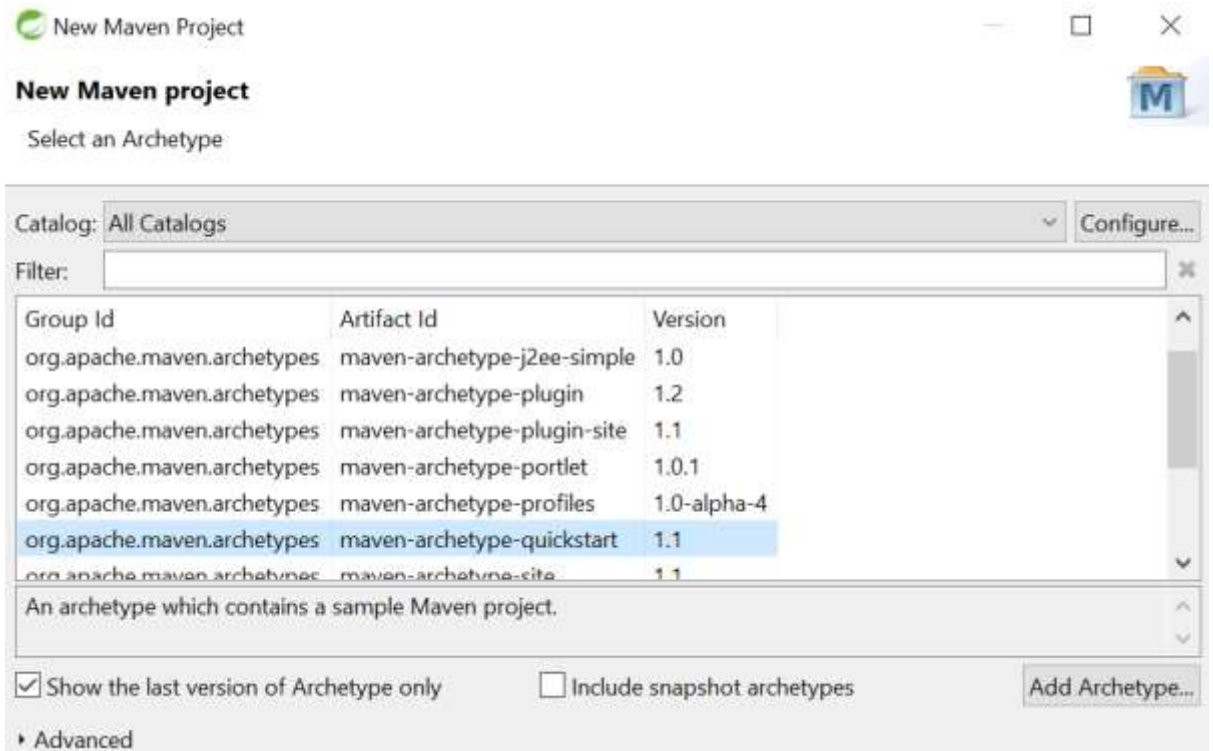

3. Set maven repository in STS
Select window->preferences

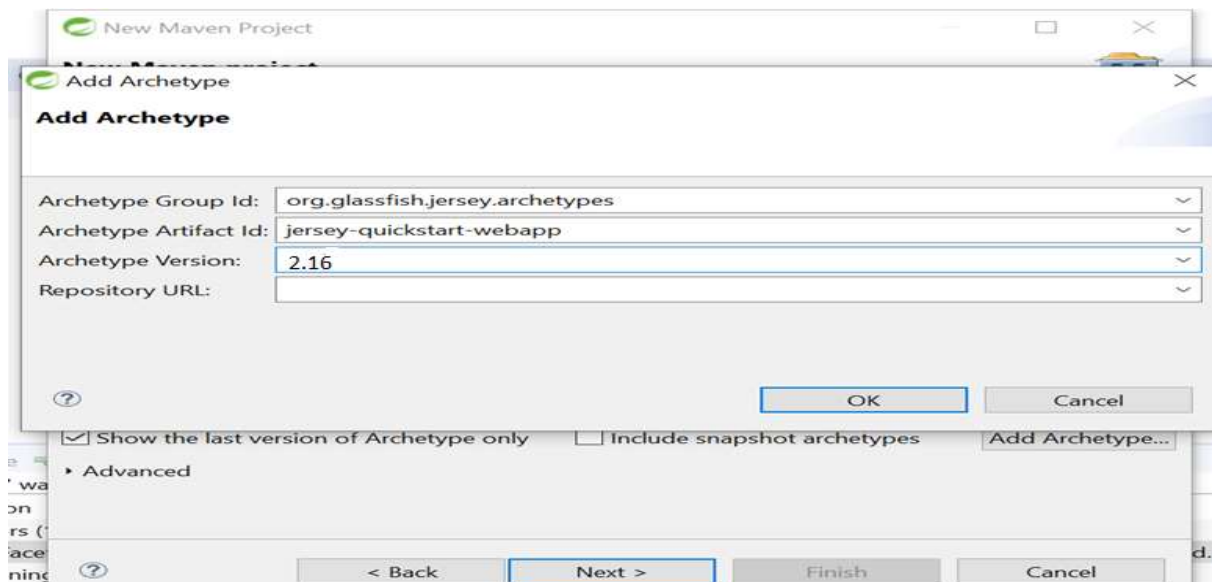

4. Create a new Maven project
Select File -> New -> Maven project

Select Next

- Select Add Archetype for jersey
 Group Id: org.glassfish.jersey.archetypes
 Artifact Id: jersey-quickstart-webapp
 Version : 2.16
 Repository URL : not required

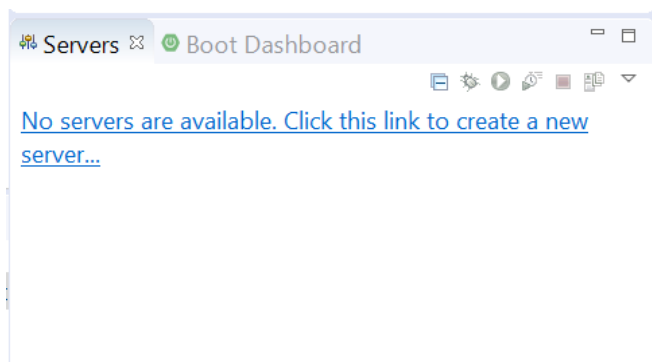

Select Finish

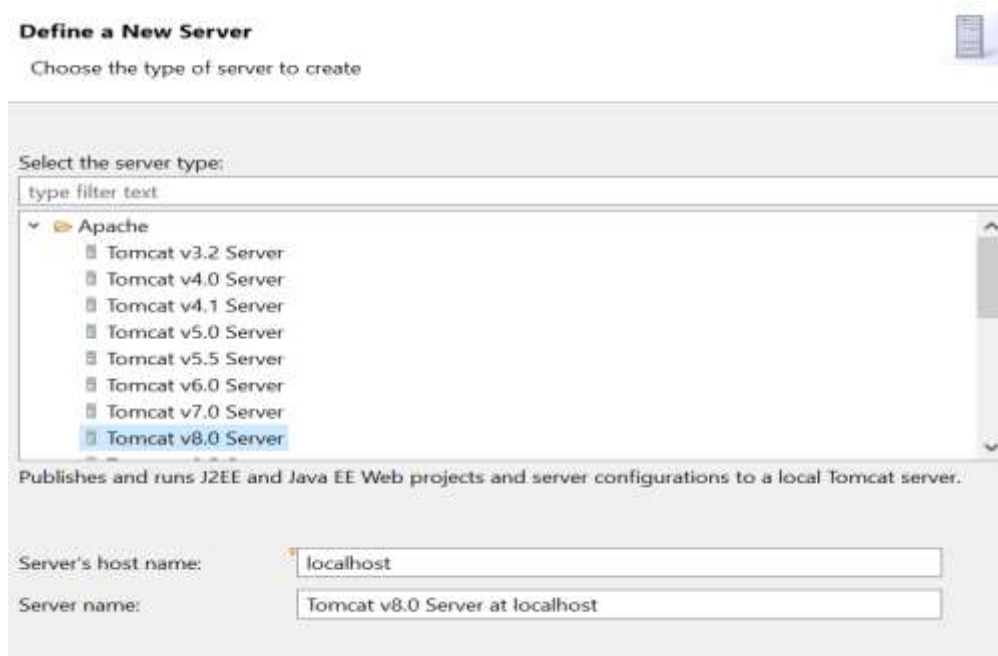

5. Select the project-> RestBasic-> pom.xml
 Add the below dependency

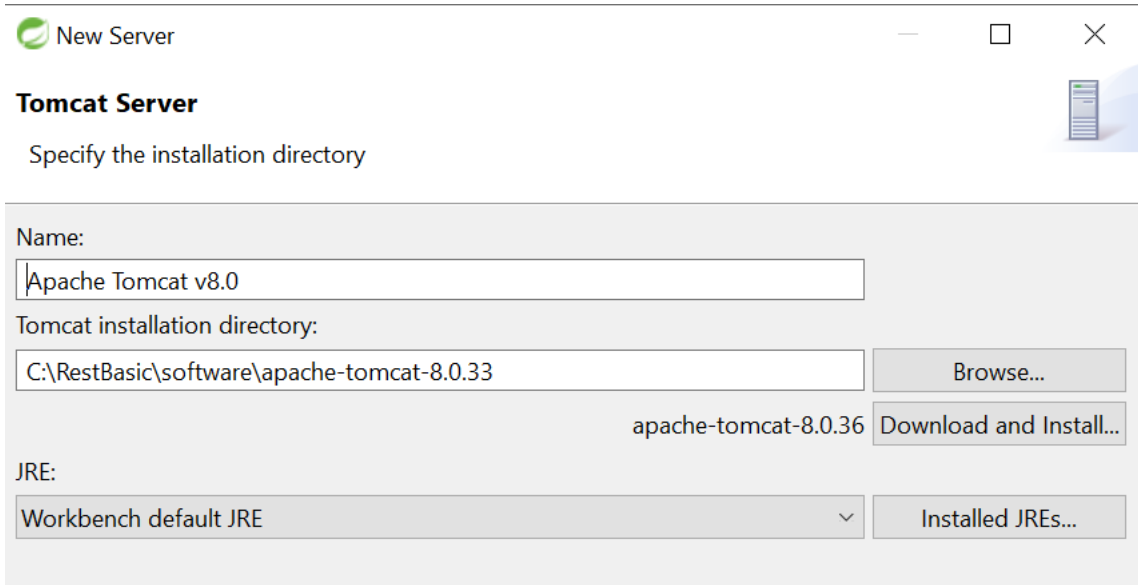

```
<dependency>
  <groupId>javax.servlet</groupId>
  <artifactId>javax.servlet-api</artifactId>
  <version>4.0.1</version>
</dependency>
```

Add tomcat server

Click "No Server are available" link

Tomcat Server

Specify the installation directory

Name:

Tomcat installation directory:

apache-tomcat-8.0.36

JRE:

- Select Browse - > point to -> C:\RestBasic\software\ apache-tomcat-8.0.33
- Select Finish button.
- Double click tomcat server -> server locations -> Use Tomcat installation (takes control of Tomcat Installation)
- Set deploy path to -> C:\RestBasic\software\apache-tomcat-8.0.33\webapps

Server Locations

Specify the server path (i.e. catalina.base) and deploy path. Server must be published with no modules present to make changes.

☐ Use workspace metadata (does not modify Tomcat installation)
☒ Use Tomcat installation (takes control of Tomcat installation)
☐ Use custom location (does not modify Tomcat installation)

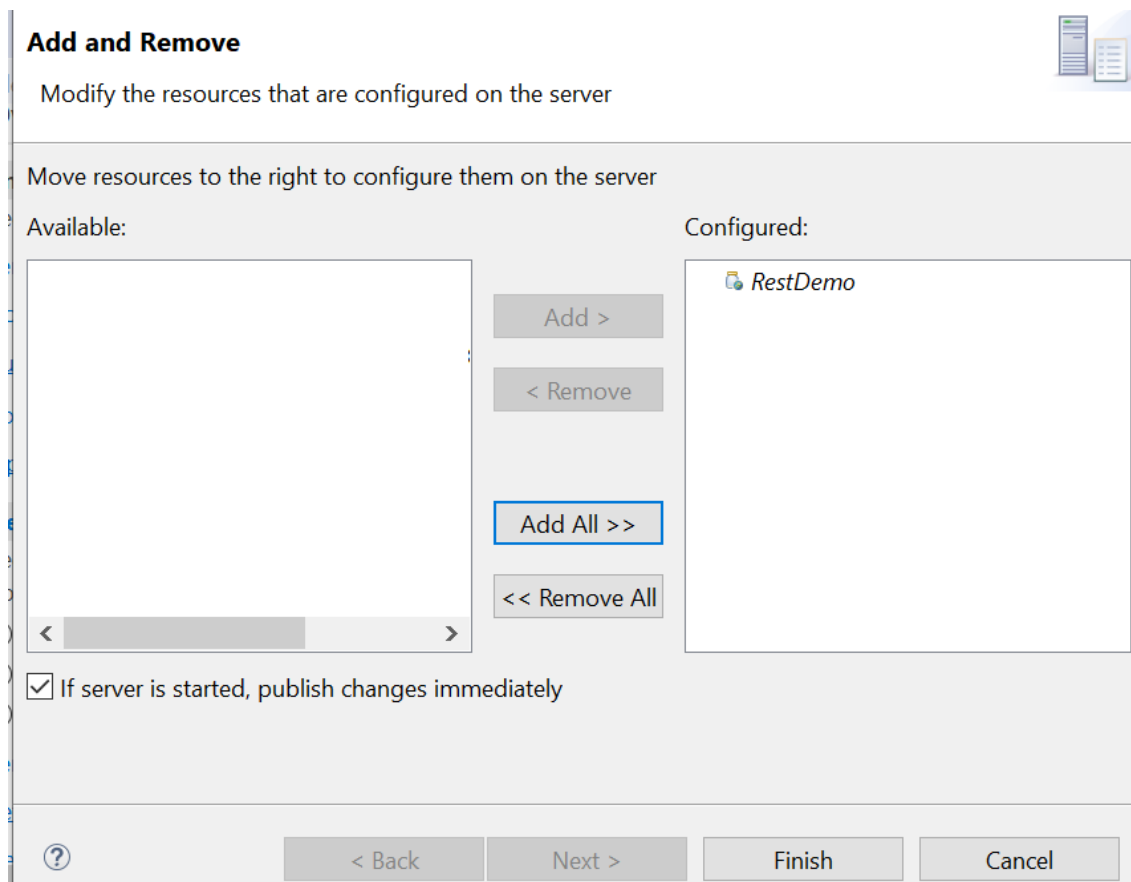

Server path:

[Set deploy path to the default value \(currently set\)](#)

Deploy path:

Server Options

- Save the file.
- Add the project to Tomcat server:
- Right click the tomcat server -> add the project

Add and Remove

Modify the resources that are configured on the server

Move resources to the right to configure them on the server

Available:

Configured:

Add >

< Remove

Add All >>

<< Remove All

☒ If server is started, publish changes immediately

? < Back Next > Finish Cancel

- Select Finish.
- Start tomcat server.
- From browser -> type
<http://localhost:8080/RestDemo/webapi/myresource> [with Get]

Output :

[Got it!](#)
